DETAILED ACTION***Double Patenting***

1. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. A nonstatutory obviousness-type double patenting rejection is appropriate where the conflicting claims are not identical, but at least one examined application claim is not patentably distinct from the reference claim(s) because the examined application claim is either anticipated by, or would have been obvious over, the reference claim(s). See, e.g., *In re Berg*, 140 F.3d 1428, 46 USPQ2d 1226 (Fed. Cir. 1998); *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) or 1.321(d) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent either is shown to be commonly owned with this application, or claims an invention made as a result of activities undertaken within the scope of a joint research agreement.

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

2. Claims 1-17 are rejected on the ground of nonstatutory double patenting over claims 1-16 of U. S. Patent No. 6,910,380 since the claims, if allowed, would improperly extend the "right to exclude" already granted in the patent.

3. Claims 1-17 are rejected on the ground of nonstatutory obviousness-type double patenting as being unpatentable over claims 1-16 of U.S. Patent No. 6,910,380.

Although the conflicting claims are not identical, they are not patentably distinct from each other because the '380 patent substantially teaches all the limitations of the claimed invention including equivalent ultrasonic transducer array for transmitting and receiving, drive signal generating means, transmission control means and signal

processing means. However, claim 1 of the '390 patent and claim 1 of the present invention differ in the functional language of the storage means. Here, the Examiner stands that the limitations, "storing plural kinds of filter coefficients..." and "performing filter processing..." of the '371 patent are equivalent to the "storing plural different acoustic pressure intensity profiles..." and "calculating image data...", respectively. That is, the claim limitations are presumed by the examiner to invoke 35 U.S.C. 112, sixth paragraph. To clarify, the "storing plural kinds of filter coefficients", which represent the sound ray data included in plural isochronal surfaces, are selected in accordance with sound ray direction and depth ('371: 45; Fig. 9A). This performs the equivalent function of the presently claimed "storing plural acoustic pressure intensity profiles..." [0017]. In this example, the ultrasound data is processed equivalently by the respective processing means and calculating means.

4. Furthermore, there is no apparent reason why applicant was prevented from presenting claims corresponding to those of the instant application during prosecution of the application which matured into a patent. See *In re Schneller*, 397 F.2d 350, 158 USPQ 210 (CCPA 1968). See also MPEP § 804.

Response to Arguments

5. Applicant's arguments, filed 05/21, with respect to the rejection(s) of claim(s) 1 and 17 under Umemura et al. (USPN 5,523,058) have been fully considered and are persuasive. Therefore, the rejection has been withdrawn. However, upon further consideration, a new ground(s) of rejection is made in view of USPN 6,910,380.
